=====================================================

Do you want to exit?  (Y/N): n
```

6. The program will perform the desired database update and show the new result for the selected product.
7. After each update, the program will ask the user if they want to exit:
   - Digit “Y” or “y” to continue with another product selection.
   - Digit “N” or “n” to terminate the program.

Department_browser.py

1. To run the code, type `python department_browser.py` in terminal.
2. Enter username and password.
3. Digit department ID to retrieve product information. The program will list child departments if the selected department is not a leaf, or the list of all the products if the department is a leaf.

```
Enter department ID to show child depts or products: 4

Not leaf department, listing child departments:

   ID     TITLE
0  10   Bedroom
1  11   Kitchen
2  12  Bathroom

Do you want to exit?  (Y/N): n

Enter department ID to show child depts or products: 8

Leaf department, listing products:

   ID          TITLE  PRICE WO/TAX  TAX %  DISCNT %  RETAIL PRICE
0  15      Men Pants         200.0   0.25      0.08        230.00
1  16  Men Underwear         100.0   0.25      0.11        111.25
2  17   Men T-shirts         150.0   0.25      0.09        170.63
3  18      Men Shoes         400.0   0.25      0.28        360.00

Do you want to exit?  (Y/N):
```

4. After each query, the program will ask the user if they want to exit:
   - Digit “Y” or “y” to continue with another query.
   - Digit “N” or “n” to terminate the program.
5. If the selected department does not exist, the exception is managed by asking for a new selection.

```
Enter department ID to show child depts or products: 77

Exception occurred: This department ID does not exit.

Enter department ID to show child depts or products:
```
